7.1

Things such as google and social media affect the way we think by giving us more information and different perspectives on topics broadening our mind to more possibilities we hadn't originally thought of.

Technology has opened up a new era of productivity in the workplace and always offers new ways to do things faster and easier and adapts to the situation of the world and the needs of the workers. Recently zoom was developed to make work possible for many people from the safety of their homes. It has made it possible to collaborate from afar and without technology that would not be possible.

For entertainment there is always new tech coming out to enhance the visual quality of movies, music, and games. A recent example would be the RTX feature developed by NVIDIA for their graphics cards using an AI to create realtime ray tracing increasing the graphic fidelity of media in the future making much more enjoyable experiences.

<table>
<thead>
<tr>
<th>Name</th>
<th>What is it about</th>
<th>Why do they need help</th>
</tr>
</thead>
<tbody>
<tr>
<td>Floating forests</td>
<td>Learn history of kelp forests</td>
<td>Landsat cannot identify the kelp and where it came from but humans can easily identify them</td>
</tr>
<tr>
<td>Planet four</td>
<td>Identify features of mars</td>
<td>Computers cannot identify the markings as features and there are too many images</td>
</tr>
</tbody>
</table>

I think its a great Idea to let people sift through large amounts of sortable data because it gives the researchers time to focus on more complicated things.
7.3

The khan academy link no longer leads to an article but the jvion tech will help make giving the right treatment to patients easier and makes the process faster leaving more time for the medical staff.

7.4

Psychographics makes it easier to tailor experiences online to the individual accessing it but only at a sacrifice of privacy. It will change how we interact because someone will always have access to information about you and it can be used to manipulate people into leaning towards one side by taking advantage of things they believe in. It may be seen as disingenuous and a invasion of privacy by a lot of people and could have negative effects.
